SYNTHETIC DEMONSTRATION CONTENT - NOT FOR PUBLICATION

PREVIEW DOCUMENT

Applied Economics Lab: Association and Causal Claims

Fictional 90-minute workshop handout for navigation and download testing.

Language	English
Level	Synthetic undergraduate workshop
Institution	None
Publication	Blocked

Learning objective

Distinguish a descriptive association from a causal estimate, state the assumptions required for interpretation, and rewrite an overconfident conclusion.

Synthetic prompt

Two fictional groups have different average market-work and care hours. Compute each mean, describe the difference, then list at least three reasons why the comparison does not identify a causal effect.

Discussion sequence

1. Define the unit and variables. 2. Reproduce the group means. 3. Draw a causal diagram. 4. Identify missing variables. 5. Write a cautious conclusion.

Download pair

Use synthetic_households.json with analyze_demo.py or demo_notebook.ipynb. The expected group means are documented in the project README.

Instructor note

No institution, real course, student record, or empirical research result is represented in this handout.
